- **CONCLUSION**

INTRODUCTION

The BRYL Hotel Booking System is a desktop application developed using Java NetBeans GUI with SQLite as its database.

The system helps hotel admin, staff, and guests manage room bookings, payments, and accounts in a simple and organized way.

It replaces manual paper-based processes by providing a digital platform for all hotel booking operations.

PURPOSE

- **Go Digital:** Replace manual record-keeping with a modern digital dashboard.
- **Easy Booking:** Allow guests to browse available rooms and book them instantly.
- **Real-Time Updates:** Show live room availability — Available or Booked.
- **Secure Payments:** Process and track payments with receipt generation.
- **Role-Based Access:** Separate dashboards for Admin, Staff, and Guests.

BENEFICIARIES

Hotel Admin

- **Gains a professional platform to manage rooms, room types, and all user accounts.**

Hotel Staff

- **Can handle guest bookings and process payments without manual paperwork.**

Guests

- **Can browse available rooms, make bookings, pay, and view receipts anytime.**

USERS AND STAKEHOLDERS

- **Administrator**
- **Staff (Front Desk / Receptionist)**
- **Guest (Hotel Customer)**

LIVE APPLICATION DEMO

CONCLUSION

The BRYL Hotel Booking System helps organize hotel room management and bookings in a simple, digital way.

It allows:

- **Admin to manage rooms, room types, and user accounts**
- **Staff to handle bookings and process guest payments**
- **Guests to book rooms, make payments, and view receipts**

Overall, the system makes hotel operations more organized, efficient, and easier to handle for everyone involved.

The image features a white background with stylized, overlapping leaf shapes in the corners. These leaves are rendered in shades of gray and black, with some showing internal vein patterns. A large, light gray, irregularly shaped area is centered on the page, serving as a backdrop for the text.

**THANK
YOU!!**
